

passion for sports grounds

OPTIMIZE YOUR SITE EFFICIENCY WITH CONTINUOUS MIXERS BY SMG.

With our fully automatic continuous mixers, a wide variety of components are easily mixed for immediate use directly on your construction site.

Our proven product range is suitable for mixing binding agents and rubber granulate, prepared with the connection of another component (gravel- or PU-unit), up to 2-component self-levelling coatings.

For example, our most powerful mixing system for one-component binder and rubber granules, the MixMatic M6008, can be expanded by connecting an additional material component (gravel unit).

Here you can see how effectively the M6008 works in combination with our paver PlanoMatic P936:

With the compact MixMatic M6004, binder and rubber granules can also be mixed homogeneously and in a highly effective, clean manner. The mixer can also be expanded by connecting another component (split or PU unit).

With both mixers, the mixing ratios can be set precisely on all pumps and electric motors for dosing the components. Our proved modular system consisting of various mixer screws, mixer pipes and feed adapters allows many individual mixing variants for different types of covering materials in finely graded dosing ratios.

The MixMatic M5300, on the other hand, mixes high-quality liquid polymers for synthetic sports surfaces as solid synthetic surfaces or sandwich systems. In particular, certified (IAAF) high-performance sports facilities require consistently exact and homogeneous material mixtures during the installation process, which are guaranteed with our M5300. An optional material container makes it possible to add granules or granulate powder.

We look forward to your inquiry about our mixers M6008 (item no. 6400114), M6004 (item no. 6400105) and M5300 (item no. 6400130).
