The RotoTine RT1502 from SMG: The ultimate attachment for loosening infill material in artificial turf systems.

The Rototine RT1502 - designed as the successor to the renowned Rototine RT1500, the RT1502 sets new standards with its robust construction and the use of durable components.

Advantages of the RT1502 in detail:

- Special device for working out hardened or glued infill material in artificial turf.
- 4 adjustment spindles with scale for precise adjustment of the working depth.
- Exactly specific layers of the backfill material can therefore be worked out, e.g. only the top layer (the material can then be picked up, e.g. by the SMG RenoMatic series).
- Steel tines enable a variety of working methods: aggressively for working out the sand layer or gently for gentle care of the artificial turf.
- Optional: For special work, e.g. brushing short-pile artificial turf systems, you can switch from spring tines to brush strips.
- Quick and easy changing of the spring tines (when worn) or on brush strips thanks to the pit stop function.
- Supported outlet flap for large quantities: prepared backfill material is conveyed in a controlled manner to the center of the work area.
