### **Pull behind equipment for lawn mowers or tractors to loosen the infill of artificial turf.**

Areas of application are e.g. long-pile football turf and short-pile tennis turf. Two ground-driven spiked rollers with a special gear ratio loosen the infill material in the artificial turf and straighten its fibers. The working depth can be precisely adjusted using 4 adjusting spindles and 2 feeler rollers. The drawbar has a hitch / bracket combination, which means that the DC1000 can be pulled by various devices. The drawbar can be moved from the working position to the transport position. For transport purposes, the device can be completely lifted out over the chassis.
