TurfBoy TB1 Eco DC

TURFBOY - MAINTENANCE

Ride-on machine for decompacting and brushing of artificial turf systems.

The TurfBoy TB1 Eco DC is powered by a powerful, emission-free 56 V electric motor with 12.5 kW, which also guarantees low-noise operation at just 95.7 dB. The automatic transmission enables speeds of up to 9.6 km/h forward and 4.8 km/h backward.

With a maximum battery life of up to 3 hours, depending on the care function used and the type of artificial turf, the TurfBoy TB1 Eco DC is also designed for the most demanding tasks. With a turning radius of just 150 cm, it is easy to maneuver even on small playing fields without compromise.

The TB1 Eco DC has a 1,100 mm wide and adjustable row of steel tines for loosening the filling material. The floating triangular brushes have a working width of 2,000 mm and gently straighten the fibers. Two optional LeaveSweep LS900 can be inserted into the triangular brush holders without the need for tools. They collect coarse dirt such as leaves, stones, branches, etc. and at the same time return the collected infill material to the artificial turf.

The TurfBoy TB1 Eco DC is versatile thanks to its hitch. Easily attach attachments such as triangular brushes, drag mats and magnet bars for comprehensive artificial turf care.
