TurfSoft TS2 DC

TURFSOFT - MAINTENANCE

Machine for the cleaning and care of artificial turf.

The TurfSoft is a solution as simple as effective for the joy in the game and maintaining the value of small areas with non-infilled and infilled surfaces (sand and sand/rubber). Using this machine you can eliminate suspended particles, abrasion and dirt particles from the top surfaces. The manoeuvrable TurfSoft is ideal for areas with little space to move, where stairs, steps and narrow doorways complicate the access to the artificial turf pitches.

The TurfSoft TS2 DC is equipped with an electric motor which controls three functions at the same time: the vibrating function of the sieve, the drive of the turbine and the rotation of the cleaning brush. With light pressure on the steering arm the brush steps into the turf and through the emerging feed it causes an easy and energy-saving operation.

You can easily clean the filter by turning the handwheel.

SMG dust filters installed by SMG comply with DIN EN60335-2-69/dust class „M“ and EN779 „F8“ or „F9“. Dust with a high proportion of fines as well as granulate/fibre abrasion (microplastics) are extracted via the powerful turbine and bound in the filter.
