RECYCLING, REDEFINED.

SMG INFILL DRYER & SEPARATOR

Two new SMG solutions for even greater efficiency in artificial turf recycling

Dear customers and partners,

our proven solutions for the environmentally friendly expansion of artificial turf systems are expanding! Two innovations are now complementing our portfolio – for even more efficient and flexible recycling of artificial turf infill material.

- **Infill-Separator** – Modular system for the precise separation of infill materials into their individual, recyclable components.
- **Infill-Dryer** – Self-contained module for targeted moisture reduction and pre-cleaning of infill material mixtures, such as rubber granules and sand.

Flexibly deployable solution

Both devices have a **modular** design and can be used **individually** or in **combination**. They each operate completely **independently with integrated control systems**. Combining them with each other or with other process modules is easily possible thanks to **automatic interfaces**.
